

## WEB UI Creation

Date	17 November 2022
Team ID	PNT2022TMID10974
Project Name	IoT Based Smart Crop Protection System For Agriculture.

### Description:

According to our sprint-3 planning we've developed the web UI to monitor the field and we've linked it with the python coding. This web UI consists of pictorial representations of the humidity & temperature. If the animal is invaded on the field, the alert will be sent with the picture of the animal. We can also control the pump using this web UI.

### Web UI Interface:
